A BARGAIN OFFERED TO MEMBERS

Bullens-Battelle's fourth edition of "Steel and Its Heat Treatment" in two volumes is outstanding in its field.

Volume I is listed at $4.50 per copy, and Volume II at $5.00. The publishers allow a twenty per cent discount in quantities. There is also a charge of 15 cents for packing and postage.

This work is so valuable to those interested in the heat treatment of steel, that the Chapter will contribute $1.25 toward the purchase price of either one or both volumes that may be ordered by members. This makes the price $2.50 for Volume I, and $2.90 for Volume II, or a total of $5.40 for both.

H. S. Jerabek, Assistant Professor of Metallography, University of Minnesota, and a member of our Executive Committee, has this to say about Volume I:

"This new edition presents for the first time many of the recent advances in heat treatment in a concise and easily understood manner. Such new subjects as grain size, hardenability, atmosphere control and nitriding are ably presented, and the former chapters on annealing, hardening, tempering, carburizing, gas carburizing, cyaniding, furnaces and physical testing have been revised and modernized. It is the outstanding reference book in the field of heat treatment."

Volume II covers engineering and special purpose steels, including all the special alloy steels, their heat treatment and uses.

If you wish to take advantage of this offer, payment should be made at this office not later than April 15 by money order or check, or by cash at the Chapter meeting April 12.

Alexis Caswell
Secretary - Treasurer.
