Our 27th Year

Off To A Good Start!

H. H. HARRIS

President, General Alloys Company
Boston, Mass.

will speak on

"HEAT RESISTANT ALLOYS IN JET AND TURBO ENGINES"

THURSDAY, SEPTEMBER 13, 1945, 8:00 P. M.

ROOM 229, CONTINUATION CENTER, UNIVERSITY OF MINNESOTA

We are indeed fortunate in having prevailed upon our good friend Mr. Harris to commence our season's meetings.

Those who have had the opportunity of hearing him before know that he is a recognized authority on his subject, and that his discussion of it will be practical and interesting.

Mr. Harris has had a broad experience in many fields, having studied engineering and metallurgy at the University of Wisconsin, and ever since has been connected with outstanding concerns in metal lines.

His company has been one of the leaders in the development of heat resistant alloys, which are of such great importance in industry.

All those engaged in any manner in the use and application of alloy steels will find this meeting well worth while, for Mr. Harris knows the answers to many problems, including some not connected with the metal industry.

GUESTS WILL BE WELCOME.

The Continuation Center is on 17th Avenue S. E., one block south of University Avenue. Members will assemble in the lounge on the ground floor of the Center.
